

ARIX Technology

The Original Auto Array Technology

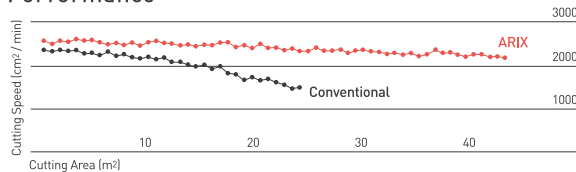

The basic Theory of ARIX Technology

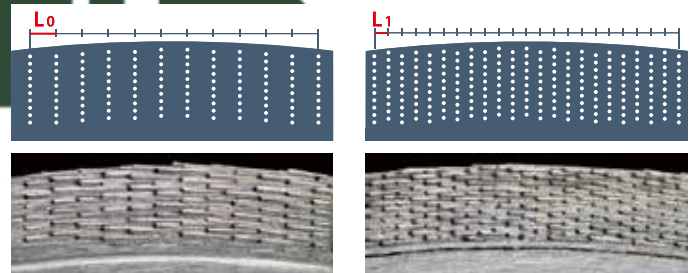

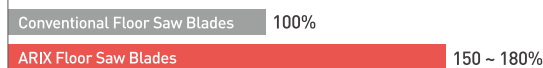

It is almost impossible to find the perfect solution for diamond tools that is best for every case, situation and material. There are just too many variables; some jobs need speed, some need life, we do though offer the best balance out there in all our blades. However, what is possible is to find a perfect solution for each case.

Arix technology is to place the diamond grits precisely in three dimensional patterns and to deliver the best performance to you in all cases, then offering various bond strengths to suit the power of the machine been used.

Performance

Tool Life

The above diagrams show how the individual diamond grits can be controlled 'L0' being wide and 'L1' showing them in a narrow alignment.

G1 Arix Floor Saw Blades

The G1 Arix Original "Premium Diamond Blade", the first using auto array technology. Despite continuous innovation since it both remains one of our most popular blades and more importantly STILL one of the best available in the world for cutting concrete and reinforced concrete quickly and efficiently.

With 5 different bonds and diameters from 600mm to 1.5m available in stock you know there will always be the right floor saw for the job.

From saw blades for low power 3 phase electric saws right up to the largest diesel machines, we can match the material being cut to the correct machine giving you the most cost-effective method to complete the job.

All available with a 25.4mm bore & FX20, FX40 & FX60 with a 25.4mm or 60mm.

✓ Cost saving Re-Tip Service ✓ Next Day Delivery ✓ Blades & Segments for any material ✓ Est. 1990
